

# Japanese Cities' Name

## Problem Statement

Given a *City* table, whose fields are described as

```
+-----+-----+
| Field   | Type   |
+-----+-----+
| ID      | int(11) |
| Name    | char(35) |
| CountryCode | char(3) |
| District | char(20) |
| Population | int(11) |
+-----+-----+
```

you have to print the name of all the cities of Japan. The *CountryCode* for Japan is *"JPN"*.
