

# Java String Reverse

## Problem Statement

A palindrome is a word, phrase, number, or other sequence of characters which reads the same backward or forward.(Wikipedia)

Given a string  $A$ , print "Yes" if it is a palindrome, print "No" otherwise. The strings will consist lower case english letters only. The strings will have at most 50 characters.

Some examples of palindromes are "madam", "anna", "reviver".

## Sample Input

madam

## Sample Output

yes
