Conditional Statements

Problem Statement

if and *else* are two of the most heavily used conditionals in C/C++. They are used to execute zero or one statement among many statements.

They are be used in the following three ways.

1. *if:* It is used to execute a statement, given the condition is true.

```
if(condition) {
    ...
}
```

2. *if - else:* It is used to execute exactly one of the two statements.

```
if(first condition) {
    ...
}
else {
    ...
}
```

3. *if - else if - else:* It is used to execute one of the multiple statements.

```
if(first condition) {
    ...
}
else if(second condition) {
    ...
}
.
.
.
else if((n-1)'th condition) {

}
else {
    ...
}
```

You are given a positive integer, n,:

- If $1 \leq n \leq 9$, then print the English representation of it. That is "one" for 1, "two" for 2, and so on.
- Otherwise print "*Greater than 9*" (without quotes).

Input Format

Input will contain only one integer, n.

Output Format

Print the output as described above.

Sample Input

```
5
```

Sample Output

```
five
```

Sample Input #01

```
8
```

Sample Output #01

```
eight
```

Sample Input #02

```
44
```

Sample Output #02

```
Greater than 9
```
